Model 6439 Eye-Level Digital Scale

The heavy-duty under structure of this eye-level scale incorporates a fabricated lever system that is enhanced by precision-ground, pressed-in knife edges which eliminate friction. This scale also features "at-a-glance" convenience of the battery-powered LCD display. Display functions include auto off, lock/release of display, automatic zero, and motion detection. With the push of a button, readings appear in pounds *or* kilograms. The 6439 now features body mass index calculation. The platform cover is easily removed for cleaning.
